

Jakobsen Mugo Pine

Pinus mugo 'Jakobsen'

Height: 24 inches

Spread: 4 feet

Sunlight: ○

Hardiness Zone: 2

Other Names: Mugo Pine, Swiss Mountain Pine

Description:

This ground hugging variety has a spreading habit that forms in clumps, revealing grey branches that give it an ancient look; needles are short and a rich deep green; a perfect accent for the low border

Ornamental Features

Jakobsen Mugo Pine is a dwarf conifer which is primarily valued in the garden for its broadly spreading habit of growth. It has dark green evergreen foliage. The needles remain dark green throughout the winter.

Landscape Attributes

Jakobsen Mugo Pine is a multi-stemmed evergreen shrub with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Jakobsen Mugo Pine is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

Planting & Growing

Jakobsen Mugo Pine will grow to be about 24 inches tall at maturity, with a spread of 4 feet. It has a low canopy. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
